#### Note

- Eye and respiratory discomfort may be experienced at high dust concentrations. Pre-existing respiratory conditions or allergies may be aggravated.

## Section 5: Fire-Fighting Measures

### Extinguishing Media

- Suitable Extinguishing Media**
- Extinguish with water, foam, carbon dioxide, or dry powder.

- Hazardous Decomposition**
- When heated acrid smoke and fumes are emitted.

- Hazardous Reactivities & Incompatibilities**
- Oxidizers, sulfuric acid, and nitric acid

- Ignition Temperature**
- 420° C

- Advice for Firefighters**
- Self-contained breathing apparatus and full protective clothing must be worn in case of fire.

## Section 6: Accidental Release Measures

### Personal precautions, protective equipment and emergency procedures

- Personal Precautions**
- Avoid dust formation. Avoid breathing vapors, mist or gas. Wear appropriate personal protective equipment.

### Methods and material for containment and cleaning up

- Spill Cleanup**
- Sweep up spilled substance and remove to safe place. Dust deposits should not be allowed to accumulate on surfaces, as this may form an explosive mixture if released into the atmosphere in sufficient concentration. Non-sparking tools should be used.

## Section 7: Handling and Storage

### Precautions for safe handling

- Handling**
- Minimize dust generation and accumulation. Provide appropriate exhaust ventilation at places where dust may form.

## Conditions for safe storage, including any incompatibilities

### Storage

- Store at ambient temperature and humidity. Temperature should be less than 32° C Relative humidity should be less than 70%. Precautions should be taken to provide for adequate electrical grounding and bonding, or inert atmospheres. Refer to NFPA 654: Standard for the Prevention of Fire and Dust Explosions from the Manufacturing, Processing, and Handling of Combustible Particulate Solids 2013 edition, for safe handling. Also refer to NFPA 61: Standard for the Prevention of Fires and Dust Explosions in Agricultural and Food Processing Facilities 2013 edition.

## Section 8: Exposure Controls/Personal Protection

### Exposure Limits

#### Explosive

##### OSHA PEL

- Product is explosive if TWA Dust = 15 milligrams of substance per cubic meter of air (15 mg/m<sup>3</sup>). (29 CFR §1926.55 Appendix A)

##### NIOSH REL

- Product is explosive if TWA Dust = 10 milligrams of substance per cubic meter of air (10 mg/m<sup>3</sup>). (The National Institute for Occupational Safety and Health)

#### Inhalation

##### OSHA PEL

- Product is an inhalation is an irritant if TWA = 5 milligrams of substance per cubic meter of air (5 mg/m<sup>3</sup>). (29 CFR §1926.55 Appendix A)

##### NIOSH REL

- Product is an inhalation is an irritant if TWA = 5 milligrams of substance per cubic meter of air (5 mg/m<sup>3</sup>). (The National Institute for Occupational Safety and Health)

### Exposure Controls

#### Engineering Controls

- Ventilation should be matched to conditions. Local exhaust ventilation or other engineering controls should be used to maintain airborne levels to an acceptable level. Explosion suppression systems are advised. Use only electrical equipment and powered industrial trucks classified for the appropriate conditions.

## Respiratory Protection

- Respirators are to be used if exposure exceeds recommended limits. NIOSH – approved dust mask may be used in dusty conditions.

## Hygiene Measures

- Current Good Manufacturing Practices should be followed. Refer to U.S. Food and Drug Administration Code of Federal Regulations 21 CFR 110.

### Key to abbreviations

NIOSH = National Institute of Occupational Safety and Health

OSHA = Occupational Safety and Health Administration

TWA = Time-Weighted Averages are based on 8h/day, 40h/week exposures.
